## EXPERIENCE/MORE ABOUT ME

I've been programming since I was a kid and started working as a Freelancer in late 2019 after graduating from High school.

- I have experience in building APIs with Rest standards.
- I'm good at teamwork and have been working with an experienced team of developers on my last project.
- Good knowledge of basic Frontend concepts and currently learning Javascript and getting good at it.
- Have experience with Git and used it in all of my projects.
- Worked and familiar with task management platforms like Trello and Notion.
- Experience in working with Docker for Deployment of projects.
- Experience in working with various databases (Postgresql, MySQL, MariaDB, MongoDB, Redis)
- Experience in working with and configuring Nginx and Traefik (web server and load balancer).
- Development experience in Linux and Linux servers.

## PROJECTS

### Addino 2021

- Addino is a social media service platform for advertising and helping with increasing followers/members/views of your accounts.

### GpNazer 2020

- GpNazer is a TelegramBot for managing groups with a large number of subscribers. it's able to manage multiple BotApi instances and telegram accounts.

### Pezeshkito

- Pezeshkito is a platform for advertisement and selling educational packages (such as konkoor) and it's highly configurable based on user campaigns.
